

REACH OUT AND READ: THE EVIDENCE

A proven early literacy intervention.

Research shows that when pediatricians promote literacy readiness according to the Reach Out and Read model, there is a significant effect on parental behavior and attitudes toward reading aloud, as well as improvements in the language scores of young children who participate. These effects have been found in ethnically and economically diverse families nationwide.

The body of independent, peer-reviewed and published research supporting the efficacy of the Reach Out and Read model is more extensive than for any other psychosocial intervention in general pediatrics.

Our research shows that in families served by Reach Out and Read:

- Parents are **2.5X** more likely to read to their children
- Parents are **2X** more likely to read to their children more than three times a week
- Families are **2.5X** more likely to enjoy reading together or have books in the home
- Children's language development is **improved by 3-6 months**
- Children's language ability **improves with increased exposure** to Reach Out and Read

Children's **language development** is improved by **3-6 months**.

Evidence that Reach Out and Read Changes Child Outcomes

Mendelsohn et al., *Pediatrics*

High-risk urban families participating in Reach Out and Read **read more frequently to their**

children. Children exposed to Reach Out and Read had higher receptive language scores (mean: 94.5 vs. 84.8) and expressive language scores (mean: 84.3 vs. 81.6). **Increased exposure to Reach Out and Read led to larger increases in language scores** (receptive and expressive). Read the complete [study](#). (PDF)

High et al., *Pediatrics*

Families participating in the Reach Out and Read model **read to their children more often** (4.3 vs. 3.8 days/week), and their toddlers' receptive and expressive vocabulary scores were higher, even when adjusting for parental education, foreign-born status, and language proficiency. Read the complete [study](#). (PDF)

Theriot et al., *Clinical Pediatrics*

Among children aged 33 months to 39 months attending a well-child clinic in Louisville, KY, expressive and receptive language scores were significantly associated with both the number of Reach Out and Read-enhanced well-child visits they had attended, and with the number of books purchased for them by their parents. **This finding supports a "dose effect" for the Reach Out and Read intervention: the more Reach Out and Read, the higher the score.** Read the complete [study](#). (PDF)

Sharif et al., *Journal of the National Medical Association*

Children participating in Reach Out and Read had **higher receptive vocabulary** scores (mean: 81.5 vs. 74.3). They also had higher scores on the Home Literacy Orientation (measured reading to child and number of books in the home) than children not participating in Reach Out and Read. Read the complete [study](#). (PDF)

Diener et al., *Journal of Community Medicine and Health Education*

This study showed that a small sample of Latino children who participated in Reach Out and Read from six months of age had **average or above average literacy skills by the end of kindergarten**, as well as high-quality home literacy environments. Read the complete [study](#). (PDF)

Evidence That Reach Out and Read Changes Parental Attitudes and Practices

High et al., *Archives of Pediatrics and Adolescent Medicine*

Parents whose children (< 3 years) had received books and educational materials during well-child visits were more likely than parents in a control group to report that they **shared books with their**

children, and to cite sharing books as **a favorite activity or a child's favorite activity**. Read the complete [study](#). (PDF)

Needlman, et al., *American Journal of Diseases of Children*

Parents who had received a book as part of Reach Out and Read were **more likely to report reading books with their children**, or to say that **reading was a favorite activity**. The benefits of Reach Out and Read were larger for families receiving Aid to Families with Dependent Children. Read the complete [study](#). (PDF)

Weitzman et al., *Pediatrics*

In a study using direct observation of children's homes, **parents were more likely to read aloud to their children** and enjoy reading together when their families had more encounters with the Reach Out and Read program. Read the complete [study](#). (PDF)

Needlman et al., *Ambulatory Pediatrics*

In a multicenter study, families exposed to Reach Out and Read were **more likely to report reading aloud at bedtime**, to read aloud three or more days per week, mention reading aloud as a favorite parenting activity, and own 10 or more children's books. Read the complete [study](#). (PDF)

Silverstein et al., *Pediatrics*

English and non English speaking families who participated in the Reach Out and Read model **increased their weekly bedtime reading**, and more parents reported reading as their own or their child's favorite activity. For non English speaking families **the number of children's books in the home also increased** as a result of the Reach Out and Read model. Read the complete [study](#). (PDF)

Sanders et al., *Archives of Pediatrics and Adolescent Medicine*

Hispanic parents participating in Reach Out and Read were **more likely to report reading to their children** compared to other parents. When parents read more frequently to their children, they were also more likely to read frequently themselves. Read the complete [study](#). (PDF)

Golova et al., *Pediatrics*

Hispanic parents whose children had received bilingual books, educational materials and literacy-promoting anticipatory guidance were **more likely to report reading books with their child at least three days/week** (66% vs. 24%) and report that reading books was one of their three favorite

things to do with their child (43% vs. 13%) than parents in a control group. Parents participating in the Reach Out and Read model intervention also tended to have **more books in the home** (for children and adults). Read the complete [study](#). (PDF)

Evidence that Reach Out and Read Results in Better Primary Care

Jones et al., *Clinical Pediatrics*

Parents participating in Reach Out and Read were **more likely to rate their child's pediatrician as helpful** than those not participating. Pediatricians in the Reach Out and Read group were more likely to rate parents as receptive than those in the non-Reach Out and Read group. Mothers in the Reach Out and Read group were two times more likely to report enjoyment in reading together with their child than those in the non-Reach Out and Read group. Read the complete [study](#). (PDF)

King et al., *Academic Pediatrics*

Successful implementation of the Reach Out and Read program was related to the culture of the clinic. Staff at clinics that struggled to implement Reach Out and Read found their jobs burdensome and reported lacks in communication. **Staff at successful Reach Out and Read Sites worked as a team and expressed strong commitments to their communities.** Read the complete [study](#). (PDF)

Byington et al., *Journal of Health Care for the Poor and Underserved*

This qualitative study examined the thank-you notes sent to staff at a Reach Out and Read clinic by Hispanic families. Families expressed thanks for the books received, as well as the literacy advice given by doctors and nurses. Many families believed that the **books and advice promoted the habit of reading** and demonstrated respect the staff held for the families and their children. Read the complete [study](#). (PDF)
